Disable Sites from Pop-UP Blockers

Anyone who is running Windows XP Service Pack 2 or a third party IE toolbar such as Yahoo, Google or MSN may experience difficulty with certain applications, such as BlackBoard or Infoaccess, due to the blocking of pop-ups. The following instructions are provided to enable pop-ups from Tri-C web sites with the blocker that comes pre-installed with Windows XP Service Pack 2.

1. From within Internet Explorer, select Tools - Internet Options.
2. Click the Privacy tab.
3. Click the Settings button located at the bottom of the screen. If you do not have the “Pop-up Blocker” section on the Privacy tab this is an indication that you do NOT have Service Pack 2 installed and therefore, do not need to follow these instructions, if you are using another vendors Pop-up blocker, obtain instructions from that vendor.

4. Do Not TURN OFF the pop-up blocker. Pop-up ads can install spyware programs on your system. For more information on spyware and other updates go to http://www.microsoft.com/security and read up on the most current information.
5. Type the following under “Address of Web site to **allow: tri-c.edu** and then **click on the ‘add’ button** to add the site to our list of allowed sites.

7. Another option for **Windows XP Service Pack 2 users (shown below)** is the information bar that appears when a pop-up is blocked on certain web sites. You can select the ‘Always-Allow Pop-ups from This Site...’ option instead of entering them manually; however this option does not always appear for all sites, so you will have to add them manually.
